CASCADE WATER JUNCTIONS

# Jiffy-Tite 

## Compact design

$360^{\circ}$ seal - leak proof
Accurate predetermination of port locations
Easy "one-piece" installation and removal

For cascade-type cooling applications, the Jiffy-Tite Cascade
Water Junctions provide the utmost in versatility and ease of use. Their compact design makes them ideal for cooling inserted cores or spot cooling in hard to reach areas of molds or dies. They can be rotated a full $360^{\circ}$ without affecting their positive Jiffy-Tite seal and are easily connected and disconnected - even when installed internally.

Final location of the ports on the body of the Water Junction can be accurately predetermined, thus ensuring proper lateral alignment with pipe clearance holes. Waterlines may be connected to the same side or opposing sides of the Water Junction. A slot on the end of the Water Junction body indicates port position and can be turned with a screwdriver to align the ports with pipe clearance holes.

The brass tube has the rigidity to maintain uniform spacing inside
the water channel and is threaded into the body for firm support.

## Jiffy-Tite ${ }^{\circledR}$ Cascade Water Junction (JW)

All dimensions are in INCHES.

Notes:

1. BubblerTubes may be used as replacements in Water Junctions above.
2. The 200, 300 and 500 Series Water Junctions are equipped with 200, 300 and 500 series
Viton seals respectively, rated at 200 psi and suitable for temperatures up to $400^{\circ} \mathrm{F}$.
